

DARSHEET MANMOVANLAL

Darsheet.Manmovanlal@city.ac.uk | 07533301675 | <https://www.linkedin.com/in/darsheetmanmovanlal04542b1ba/>

A strong passion with cutting edge computers/systems, keeping up-to-date on the latest trends, alongside a heavy interest in photography.

EDUCATION

- City St George's, University of London** **BSc (Hons) Computer Science** Sep 2022 - Jun 2025
- Graduated July 15th 2025 and achieved a 2:1
- St Angelas Ursuline Sixth Form** Sep 2020 - Jun 2022
- Economics - A
 - Computer Science - A
 - Mathematics - B
 - Part of Sixth Form Choir (Year 13)
- Stratford School Academy** Sep 2015 - Apr 2020
- Chosen GCSE's: Design & Technology - 8, Computer Science - 8
 - GCSE grades 9-7

WORK EXPERIENCE

- Stratford community food hub, E15 1BG** **Food Hub Assistant** Apr 2021 - Jul 2021
- Packaged bags full of groceries, containing fruits, bread etc, handed out to people in need
 - Utilized teamwork skills to accelerate the process of getting food ready to be sent out through working together on a single bag of produce or handling multiple pallets of bags
 - Showcased communication by talking through, placing crates of bags belonging to the correct side
 - Recorded codes of specific consumers to be handed their unique bag of food
 - Organisational skills applied when required to re-stock produce from newly arrived crates using a pallet lifter
 - Actively kept the building tidy, taking out large bin bags daily
- Peacocks, East Ham** **Floor Staff** Aug 2019 - Aug 2019
- Moved around clothing payload using cargo elevators
 - Assisted shoppers with directions on clothing along with other utilities
 - Kept the store tidy through picking up fallen clothes and gave tags to items
- Young Professionals, Online**
- Gained insight across multiple firms such as IBM, EY, Capgemini
 - Listened to speakers from numerous companies on the pathways they took, e.g. apprenticeship
 - Made connections to these firms through linkedin

PROJECTS

- Advanced 2D Java Game**
- Took advantage of OOP programming through advanced class structures, re-using these for later, adding to the modularity of the code
 - Created enemy AI to track the player and follow them in the event of an ongoing battle
 - Made use of encapsulation to allow for multiple levels in-game, not interfering with each other.
 - Applied mathematics to calculate trajectories of bullets and hit-boxes for characters.
- Python/TKinter destination scheduler GUI**
- Implemented a selenium driver to scrape information from relevant webpages and display accurate information for weather, maps and directions.
 - Experimented with a library created for building GUIs in python, allowing me to place, create and link buttons/entries to their relevant actions and types
- Final Year Project (advanced Android application for learning to drive)**
- Created a platform for driving instructors and learners to easily interact with each other.
 - Utilised Kotlin along with Jetpack Compose components to build a complete Android package with a Firebase database, Stripe integration, notifications, messaging, dynamic calendar updates, and much more.
 - Already in-use with my own driving instructor and numerous students.
